1. Find the maximum and minimum values of

$$f(x) = -x^3 + 5x^2$$

on the interval $-2 \le x \le 4$.

- 2. A rectangle has its base on the x-axis and its upper two vertices on the parabola $y = 12 x^2$. What is the largest area the rectangle can have?
- 3. Find the point(s) on the parabola $y = x^2 3$ that is closest to the origin.

(Hint: Rather than mimimizing the distance to the origin, you can minimize the *square* of the distance. This will make the algebra easier.)
